

SMARTBAR SERIES

The SmartBar is specifically designed for trailers and comes with soft rubber feet that pair with trailer walls. The additional cushioning in the feet compensates for the flex of some trailers, and the bar can be used to brace an entire load, or only part of a load. Smartbars can be positioned horizontally or vertically to ensure proper securement with the superior gripping power of the rubber feet. Its square tubing produces a strong hold to prevent the bar from bending. A vinyl coated lever provides smooth, positive operation and the optional SmartBar Repair Kit is there when required. For additional holding power, the SmartBar E-Trak attachment is available for use with any SmartBar, doubling the front to back holding power into trailer e-track locks.

FEATURES

- Delivers 20% more holding power than conventional load locks
- Optional SmartBar E-Trak Kit and SmartBar Repair Kit
- Large adjustment range
- Versatile placing
- Large and small rubber feet as options

SMARTBAR SERIES

FINISH

- Zinc plated bar; vinyl coated lever
