

SER

HEAVY DUTY ELECTRIC
CHAIN HOIST

Household voltage. Industrial power.

Need a single phase powered hoist with the duty cycle of a three-phase hoist? Look no further than the SER. Designed to exceed H4 industrial use ratings, the SER is equipped with a TEFC motor and a maintenance-free, self-adjusting, pull-rotor brake. That means you'll get a single phase hoist that's able to handle the long lifts and long shifts of any industrial job.

1 Extreme-Duty, Single-Phase Fan-Cooled Motor

The SER electric hoist is equipped with a 60-minute H4-rated motor which is unmatched in a single-phase offering. Built for extremes, the SER delivers proven performance in the most demanding applications.

2 Self-Adjusting Maintenance-Free Brake

With no brake coil to fail or discs to replace, the electromagnetic pull rotor brake on the SER is self-adjusting and virtually maintenance-free.

3 Long-Life Friction Clutch

The friction clutch is designed to last so you can focus on the job at hand. Keep lifting longer with protection from overloading and overwinding which can damage the hoist.

4 Heavy Cast-Iron Chain Guide

The heavy cast-iron chain guide provides quiet and smooth chain movement. Easily removed without disassembly of the hoist, it allows for easy maintenance in those demanding heavy-duty applications.

5 Oil Bath-Lubricated, Heat-Treated Gearing

Kito's own heat-treating process increases the overall hardness and strength of internal parts which run smoothly when immersed in an oil bath. This extends service life by reducing friction, vibration, and heat.
