

UBC

UNIVERSAL BEAM CLAMP

KITO®

Holds true every time.

Kito's UBC can be used as a temporary anchor point or as a below-the-hook device. You'll have peace of mind knowing the secure clamp uses proven, lock-nut protection to rule out loosening due to vibrations. Safe and functional, the UBC is also designed with a wide adjustable-jaw opening and both a left- and right-hand clamp screw for quick operation.

① Temporary or Semi-Permanent Anchor Point

Kito's UBC Universal Beam Clamp is the perfect accessory when a temporary or semi-permanent hoist anchor point is required.

② Below the Hook Flexibility

The UBC adjustable beam clamp offers a cost-effective method for most work-holding and positioning applications, and can also be used as a below-the-hook lifting attachment.

③ Locknuts That Stay Tight

Designed for added safety and to resist loosening, the UBC's locknut protection feature keeps things tight.

④ Designed for Low Headroom

Take advantage of low headroom in your application with a built-in suspension pin.

⑤ Wide-Jaw Opening

Install the UBC beam clamp onto any beam, including tapered or flat-flanged, to create a strong and safe hoist mount. For industrial, construction, rigging or holding, the UBC beam clamp can do it all.
